SUMMARY

Motivated, Enthusiastic and dedicated Computer Science Engineering student specializing in Artificial Intelligence and Machine Learning. Proficient in Python and Java with a solid understanding of programming fundamentals and problem-solving techniques. Demonstrates strong analytical thinking, adaptability, and a commitment to continuous learning. Eager to apply technical knowledge and AI concepts to develop innovative solutions for real-world challenges.

EDUCATION

Bachelor of Technology in Computer Science & Engineering

Kalasalingam Academy of Research & Education, Tamil Nadu (Grade Point: 8.5/10)

Expected 2027

Intermediate Education

Sri Chaitanya Mahila Jr Kalasala, Andhra Pradesh (Grade Point: 10/10)

2023

Board of Secondary Education

Sri Chaithanya High School, Andhra Pradesh (Grade Point: 10/10)

2021

SKILLS

- Programming Languages : Python, Java
- Data Analysis & Visualization Tools : Microsoft Tools, Power Bi
- Artificial intelligence : Prompt Engineering, Responsible Ai, Vibe Coding
- Software Tools : VM VirtualBox, Docker
- Soft Skills : Problem solving, time management, adaptability

PROJECTS

1. VisionMate AI – Real Time Vision Assistance System for Blind People | Python, Type Script, FastAPI, Next.js

Developed VisionMate AI, an AI powered assistive web application designed for visually impaired individuals, leveraging real time computer vision and voice interaction to enhance environmental awareness and navigation. Engineered a full stack platform using FastAPI and Next.js integrated with YOLOv8, OpenCV, Whisper and edge-tts for live object detection, scene understanding, OCR based text reading and intelligent voice feedback. Implemented distance estimation and proximity alert mechanisms with audio warnings to help users avoid nearby obstacles and collisions. Designed scalable APIs and optimized frame processing pipelines for low latency real time detection, supporting features such as crowd detection, directional guidance, emergency SOS alerts and multilingual voice assistance. Deployed the frontend on Vercel and integrated backend services hosted on Render, ensuring scalable, secure and production ready deployment.

2. TravelWear AI – Smart Weather Based Outfit Planner | React.js, Node.js, MongoDB

Developed and deployed a full-stack AI-powered travel fashion assistant at travelwear-ai.vercel.app that recommends clothing based on real-time weather conditions fetched from OpenWeatherMap API for any destination worldwide. Implemented a Smart Style Advisor using Canvas API color histogram analysis to detect user skin tone from uploaded photos and generate personalized outfit color recommendations based on skin tone combined with destination weather conditions. Built an AI chatbot providing destination-specific clothing, food and places-to-visit recommendations, a smart packing checklist generator with PDF export, 5-day weather forecast with travel date selection, and JWT-based user authentication with saved outfits and travel history stored in MongoDB Atlas. Deployed frontend on Vercel and backend on Render with environment-based configuration.

3. Emotion Based Automatic Music Player | Python, Embedded Systems, Sensors

Developed an intelligent music recommendation and playback system capable of automatically changing songs based on user emotions and mood detection. Integrated sensor based input processing and emotion analysis techniques to identify user emotional states and personalize music playback in real time. Engineered the system using Python and embedded components to support automated song selection, responsive playback control and adaptive user interaction, delivering an enhanced and personalized entertainment experience through real time emotion aware automation.
